

The new County House Numbering System is laid out basically at 1,500 house numbers per mile (indicated by the grid lines). The range of house numbers for any square mile are shown on grids at outer edge of map. The last digit of a county house number will indicate on which side of the road the house is located. If the last digit of the number is even, the house will be on the East side of all roads running North and South - and on the South side of all roads running East and West.

FOR EXAMPLE:
 22510E Acampo Road will be found by moving down the 22500 East grid to Acampo Road. The house will be located on the South side of the road, just East of Johnson Rd.
